

PPP Connection Procedure for Windows XP

Procedure to establish a modem communication with the iS³ using Windows XP.

- 1- Create a dialup connection as if your were connecting to an internet service provider.
(If you are not familiar with this, refer to the follow the procedure **Procedure to create a dialup connection** given below)
- 2- In the properties of your dialup procedure;
 - a. You don't need any username and password for the PPP connection
 - In the **option tab**, uncheck **prompt for username and password**
 - b. Disable de PPP software compression
 - In the **Networking tab**, go in the **Settings** for the PPP connection and uncheck **Enable software compression**.
 - c. In the **Networking tab**, go in the **Properties** for the **Internet Protocol (TCP/IP)**, then click **Advanced** an finally uncheck **use default gateway on remote network**
 - d. You might have to add a connection script in your windows dial-up connection depending on your iS3 configuration.
 - In your iS3 configuration, in the PPP configuration section, if the **Mode** is **Direct connection**, you don't need the script.
 - If the **Mode** is **Script connection**, you must use the script. Note that this script is available on the CD that was shipped with your iS3. (see Multitel iS3 PPP.scp)
- 3- The connection should now be configured.
